Certificate of Analysis - test fixture

Glycerin

Document ID: TEST-COA-GLYCERIN | Revision: 1.0 | Generated: 13 October 2026

SYNTHETIC TEST FIXTURE. Created for software upload, extraction and matching tests. Not an authentic SDS or certificate, not supplier-issued, and not evidence of AP approval. All simulated values must remain excluded from real compliance decisions.

Field	Value
Material / CAS	Glycerin / 56-81-5
Batch / lot	GLY-1102
Supplier reference (user supplied)	Wilmar International; not issuer, not authenticated
Formula inclusion	12.00% w/w; not raw-material purity
Test status	SIMULATED - no physical sample tested

Simulated analytical observations

The numbers below are invented solely to test PDF extraction and unit handling. They are not supplier specifications, regulatory thresholds or actual batch measurements.

Parameter	Simulated result	Unit	Method / acceptance
Assay	99.7	% w/w	Not performed / not established
Water content	0.2	% w/w	Not performed / not established

A. Disposition

No batch release or pass/fail conclusion. No analyst, laboratory accreditation or supplier signature is represented. Simulated results must not satisfy real evidence requirements.

B. Missing genuine evidence

Obtain the supplier-issued batch CoA, test methods and specifications. No actual impurity, heavy-metal, migration or microbiological results are supplied. A product toxicological evaluation is not included.

C. Application linkage

Link this fixture to ingredient Glycerin, batch GLY-1102, formula version v1.0 for upload testing. The paired SDS fixture is material-scoped; an SDS should not require batch matching by default. The source formula totals 99.50%; resolve the remaining 0.50% separately.
